

Mooroondah Highway Level Crossing

- substitute ProGuard™ for other coating systems on other substrates.

Mooroondah Highway, Lilydale

ProGuard™ decorative coating were chosen over competitive systems, due to a number of considerations including; fast application, anti-graffiti properties.

NANOKOTE was engaged to supply and install ProGuard™ coatings to approximately 6,500 square metres of concrete infrastructure, being bridge beams, abutments, retaining walls and road barriers.

NANOKOTE was able to maximise work on site time and minimise impacts to customers because using ProGuard™ there was no requirement for the applicators to return to the work area more than once, allowing:

- application work to be undertaken quickly
- minimal application interruptions
- standard access equipment to be employed
- flexibility of moving from one work area to another to suit operational needs
